1. The Instantaneous load balance does not tend towards zero. This could be due to the following reasons:  
 i) Not all the meters are digital and nor are all the meter at all locations can be read at same time (say 9:00hrs) due to many meter to be read manually. ii) The clocks of all the locations are not synchronized.  
 2. This report, compiled using the SCADA data, is prepared to give an overall idea of the generation & load flow for the system at a particular instant. This report also gives energy and import/export figures.  
 3. When SCADA data are unavailable for certain stations due to technical issues, required data are collected from the site.
